---> Comment Text :
I support the Yucca Mountain PSSE and request that the Secretary of Energy proceed with a positive decision to recommend to the President that Yucca Mountain is a suitable site for the development of a repository. I believe the science supports this recommendation, and that probabilistic miniscule releases of radioactive isotopes millenia in the future cannot possibly harm any society. In addition, I think the earth's capability to delay and absorb these materials has been neglected in these studies, such that no excessive exposure to people would ever occur even if the containers were to fail in thousands of years.
